

Report Analysis for Marketing campaign

From 8 April 2025
to 22 May 2025

Marketing Campaign Performance Analysis on Facebook

Introduction

As part of evaluating the performance of the marketing campaign launched on Facebook from April 8 to May 17, 2025, a comprehensive analysis was conducted using Meta Business Suite and Power BI tools. The objective was to assess the campaign's effectiveness in terms of reach, engagement, and audience targeting.

Objectives of the Campaign Performance Analysis on Facebook

1. Measuring Campaign Reach (Reach & Views)

- **Reach:** Represents the number of individuals exposed to the campaign during the analysis period. This metric helps evaluate how far the campaign has penetrated the target audience.
- **Views:** Reflects how many times the published content was viewed, indicating the audience's interest in the content.

2. Analyzing Audience Engagement with Published Content

- **Likes, Comments, and Shares:** Engagement levels are evaluated by analyzing the number of likes, comments, and shares on posts.

3. Identifying the Most Effective and Viral Content Types

- Classifying and analyzing different types of content (photos, videos, texts) to determine which formats generate the highest engagement and reach.
- Providing recommendations for future content strategies based on performance insights.

4. Understanding the Characteristics of the Engaged Audience

- Analyzing demographic attributes of the audience such as age, gender, and geographic location to better understand who interacted with the campaign.

- Utilizing these insights to tailor future campaigns more precisely.

5. Providing Future Recommendations to Improve Upcoming Campaigns

- Based on the findings, developing new strategies to enhance the overall performance of future marketing efforts.
- Suggesting best practices for increasing both engagement and reach using data-driven insights.

This analysis aims to boost the effectiveness of future marketing campaigns by offering a deeper understanding of audience behavior and leveraging data to refine strategic decisions.

1- Performance Overview

During the campaign period (April 8 – May 22, 2025), the marketing campaign achieved notable results in terms of reach and visibility, with total post reach nearing **86,000** and video views exceeding **107,000**.

A total of **2,078** interactions were recorded throughout the campaign, and **213** new followers were gained.

It is noteworthy that the paid ad, which launched on **April 21** and lasted for **5 days**, clearly contributed to increasing engagement. Key performance indicators started rising on that day, peaking on **April 27** (two days after the ad ended), indicating that the campaign created a momentum that extended beyond the ad duration.

Additionally, content published on **May 4** achieved a new spike in reach, reaching approximately **13,000**, reflecting the sustained strong performance of the campaign due to effective publishing timing and content quality.

It is important to note that the **Reach** value shown in **Meta Business Suite** was **61,955 Unique Reach**, whereas **Power BI** displayed the cumulative total reach across all posts, amounting to **85,000**. This difference is expected due to the variation in calculation methods.

2- Audience Analysis

Audience Descriptive analysis

The age and gender analysis revealed that **females represented 68.2%** of the total followers, compared to **31.8% males**, reflecting effective targeting of the female audience—aligned with the campaign’s awareness objectives.

In terms of age groups, the largest segment was between **18 to 24 years**, followed by the **25 to 34** age range. This indicates that the campaign successfully reached its primary target of university students and young adults.

It is also notable that engagement from older age groups (**35 years and above**) was limited, which may suggest that the campaign’s content and publishing style were more appealing to a younger demographic.

Audience geographical analysis

The geographical data indicates that the campaign successfully reached its target audience in **Dakahlia Governorate**, with **Mansoura city** ranking first, accounting for **37.1%** of total followers within Egypt. It was followed by other cities within the same governorate, including:

- **Aga** with **5.0%**
- **Kafr El Sheikh** and **Damietta** with **3.6%** and **3.2%** respectively
- **Sherbin, Mit Salsil, Belqas, Senbellawein, and Gamasa**, with percentages ranging between **1.6% and 3.2%**

In total, over **53%** of the followers within Egypt were from Dakahlia, clearly reflecting the accuracy of the campaign’s geographical targeting.

On the international level, **Egypt** dominated with **105.9%**, due to platform-specific categorizations across regions within the same country. It was followed by several Arab countries, including:

- **Saudi Arabia** (1.1%)

- **Algeria** and **Morocco** (0.7%)
- **Syria** and **Tunisia** (0.5%)
- In addition to minor percentages from **Libya**, **Yemen**, **the United Kingdom**, and others.

These findings suggest that international reach was limited and primarily focused on the local audience—successfully fulfilling one of the campaign’s key geographic objectives.

Followers increase rate during the campaign

By the end of the campaign, the total number of **followers reached 443**, with **213** new followers gained during the campaign period—representing a growth rate of approximately **48%**.

This growth serves as a positive indicator of the audience's responsiveness to the content delivered throughout the campaign, especially following the launch of the paid advertisement, which clearly contributed to increased engagement and follower acquisition.

3- Content Analysis

Campaign data showed that **videos were the most frequently used content format**, achieving the highest reach rates.

The most notable was the video published on **April 27**, which recorded over **52,000** in reach—highlighting the effectiveness of publishing shortly after the paid ad campaign ended.

However, videos did not generate the highest engagement; in fact, they showed a relatively **low interaction rate** compared to other content types.

In contrast, **Reels achieved the highest engagement rate**, reaching **35.3%**, despite being published later in the campaign, which affected their reach volume.

As for **photos**, they demonstrated **moderate performance** in terms of engagement, with an average interaction rate of around **17%**, placing them third among content types in terms of engagement.

Summary

1- Reach and Interactions

Required	Details
The overall Reach	86,000 Total Reach (Great Number)
(Unique Reach)	61,955 Unique Reaches, very powerful
Campaign impact on followers	213 new followers with increase 48%
Interaction rate	2078 total interactions (Very low rate)

2- content performance

Required	Details
Analyze the performance of each content type	A comparison was conducted between Videos, Reels, and Photos based on Reach and Engagement .
Identify the best-performing type in terms of engagement	Reels achieved the highest interaction rate (35.3%).
Identify the best-performing type in terms of reach	Videos (especially the one published on April 27) recorded the highest reach.

3- Audience insights

Required	Details
Was the Mansoura/Dakahlia audience targeted?	53% of the audience is from Dakahlia , with Mansoura alone representing 37.1% .
Focus on university age group (18–24 years)	The 18–24 age group represents the largest share (approximately 65%).
Gender breakdown (Male/Female)	Females: 68.2%, Males: 31.8% .

Conclusions & Recommendations

Campaign Performance Analysis – Key Insights

1. Reach & Engagement

- The campaign succeeded in achieving wide exposure, reaching over **61,000 unique users**.
- The **sponsored ad** had a clear impact on boosting reach, but **overall engagement remained low** at just **2.41%**, indicating a gap between content views and user interaction.

2. Audience Analysis

- **Women made up 68%** of the audience, aligning well with the content’s objective.
- The **dominant age group was 18–24 years**, reflecting strong outreach to the targeted university-age demographic.
- **Geographically, Dakahlia Governorate** led with over **53%** of the audience inside Egypt, with **Mansoura** alone accounting for **37%**.

3. Content Performance

- **Videos** proved most effective in driving reach, especially the one published on **April 27**, which achieved over **52,000 views**.
- **Reels** delivered the **highest engagement rate (35.3%)** despite low reach, indicating high audience appeal.
- **Photos** performed moderately but provided a **steady engagement rate (~17%)**.

Recommendations and Proposed Experiments

1. استخدام الفيديو لزيادة الانتشار، مع توقيت مدروس

- **Proposed experiment:** Launch a video simultaneously with the sponsored ad, as was done with the April 27 video which earned over **52K in reach**.
- **Objective:** Leverage ad momentum to generate a strong wave of organic exposure.

2. Support Videos with Reels to Boost Engagement

- **Proposed experiment:** Publish a **Reel** either on the same day or the day after a campaign video to drive more engagement toward it.
- **Objective:** Increase engagement by using Reels, which achieved a **35.3% rate**, especially effective among younger audiences.

3. Diversify Content Types and Monitor Performance

- **Proposed experiment:** Regularly alternate between **videos, photos, and Reels** throughout the campaign, then assess each type's performance weekly.
- **Objective:** Identify the best-performing formats for both reach and engagement in the short term.

4. Improve Call-to-Action (CTA) Clarity

- **Proposed experiment:** Use short posts with direct CTAs like *"Tell us your opinion"* or *"Have you faced a difficult moment during engagement?"* in Reels and photo captions.
- **Objective:** Lift engagement rate (currently **2.41%**) by encouraging more interaction.

5. Intensify Targeting of Key Cities (e.g., Mansoura)

- **Proposed experiment:** Tailor content with references to local culture or dialects specific to **Mansoura/Dakahlia**, which made up **53%** of the local audience.
- **Objective:** Strengthen geographic relevance and deepen interaction with the core regional audience.
